

Core Disaster Recovery Services

Your core system is the most critical computer in your institution.

- Are you backing it up to tape each night?
- Where are you storing the tape?
- Is there a replacement system available?
- Where would you locate it?
- How long before you're online again?
- If your offsite storage far enough away, and secure?

Using traditional backup methods like tape are wrought with problems including reliability, tape formats, tape drive failures. And, then there's the time for restore. How long do you have to wait during a core system failure or disaster?

Hogan Financial is the answer to these questions for over 70 client institutions across the United States. From our state-of-the art recovery facility, just minutes from Dallas-Ft. Worth airport, we can solve your core processing backup and recovery issues.

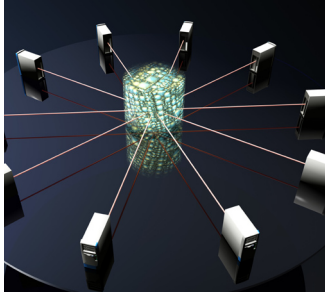

Using advanced database replication software, keep your core system up-to-the-minute ready at our facility, and solve your offsite backup issues. Connectivity to your core system can be restored using internet VPN or private circuit to Hogan — either way, your core system will be ready, and ready fast in the event of disaster.

And best of all, it will be managed by financial system professionals who know and understand the critical nature of your client data and systems.

Services Include:

- Replication of your database to a target system at Hogan Financial
- Access to the database and core system programs via internet VPN or private circuit
- Secure facility with redundant power, redundant data circuits, redundant HVAC
- Professional staff well versed in core systems software and services

About Hogan

Hogan Financial Systems, Inc. is a provider of disaster recovery services and item processing solutions. Since 1998, we've stood ready for over 70 financial institutions in the event of a disaster declaration.

When we say we are a "partnership you can count on", we mean that you can expect us to be at your side during a disaster. Unlike generic disaster recovery services, we don't just introduce you to a room full of generic computer equipment and say, "it's all yours!" Instead, it is our job to help you to recover your system and make it operational on our systems.

Since 2004, our clients have enjoyed our hosted item processing service, which relieves them of the headaches and burden of managing a check image processing system — our clients utilize our system instead, yet still operate as an in-house bank. We'll take care of system capacity, storage, backup, software updates and vendor relations — your focus is processing your checks and statements. This hosting service can include your core system management as well — just ask us about how this can benefit your institution. And, if you're interested, we can render your statements and do your item keying and balancing for you! Just ask us for a quote.
